

Cannabis Trolley Transport & Dry Room Hanging System

Engineering Solutions For All Your Hang-Ups

www.srsconveyors.com ■ sales@srsconveyors.com

SRS Conveyors is pleased to introduce our innovative plant drying rail system. **The Cannabis Trolley Transport System** provides an effective material handling solution for storing and transporting cannabis plants during the harvesting, drying, and trimming processes of cannabis production.

The system creates an efficient flow of material while maximizing the use of available vertical space in your facility. Plants are hung on multi-tiered rolling trolleys, which can link together to form a train. This enables you to carry and transport thousands of cannabis plants at once. The trolleys can be left directly inside humidity controlled drying rooms, eliminating the lengthy step of hanging and collecting plants between each production phase.

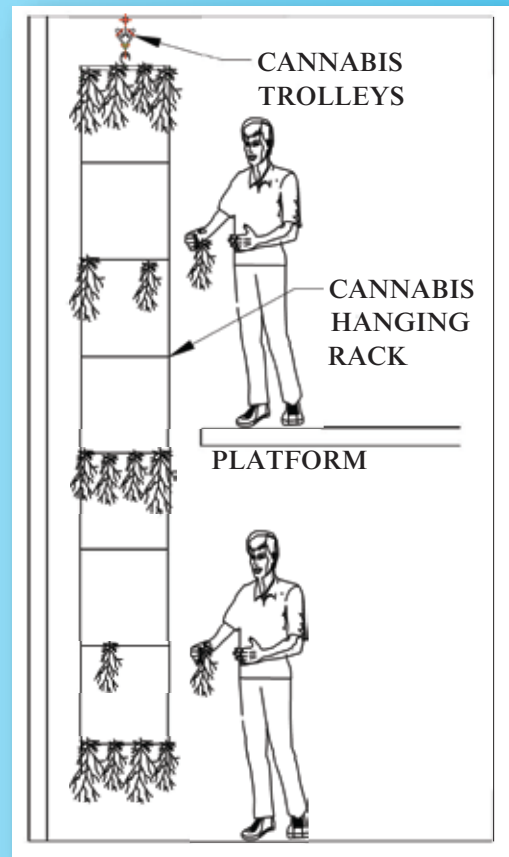

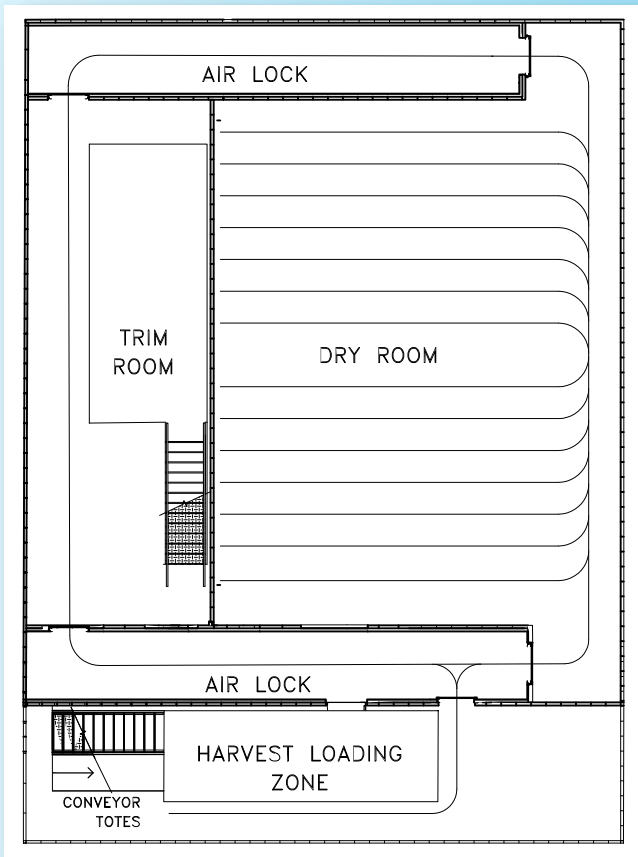

Benefit Summary

- **GMP Certifiable**
- **Hanging racks are removable**
- **Easy to load and retrieve**
- **Hanging tiers are adjustable**
- **Maximize every cubic inch of your drying room**
- **Easy to clean & hygienic**
- **Ceiling or floor mounted system**
- **Transport thousands of plants**
- **Easy to maintain**

Cannabis Trolley Transport & Dry Room Hanging System

Each Cannabis Trolley Transport System is a customized solution engineered to meet your needs; the system is completely modular and very flexible. The system can be designed to fit your building, volume and budget.
